

Driver Installation for user's **Token Device** is dependent on the token manufacturer.

Users have to install the respective token drivers from

<https://srm.bel.co.in/>

(On the Left Side – Find and Click on “Help File Java” Option)

For instance User is having Token Device from GEMALTO then he/she has to install GEMALTO's drivers from the above given URL (32-bit or 64-bit depending on user's system), same way if it is MOSER BEAR then only MOSER BEAR Drivers will work.

\*NOTE: There can be different manufacturers for your token device apart from the two mentioned above. We are hosting drivers for almost every possible manufacturer. Download and install the corresponding drivers only after checking your token manufacturer.

This activity is user's device and machine dependent and so has to be done separately.
